

Vaibhav Parasa

Data Scientist & ML Engineer · Agentic AI & LLM Systems

San Francisco, CA (open to relocation) · 612-229-9239 · vaibhav.v.parasa@gmail.com · linkedin.com/in/vaibhavparasa · github.com/starkparasa · starkparasa.github.io/Personal-Profile

EXPERIENCE

Lead Data Analyst / ML Engineer

Dec 2025 – Present

HorizonPlus Technologies, Remote | Python, LangChain, Databricks, Snowflake, Tableau

- Own the architecture for a client-facing agentic AI implementation that catches 35% more leaks and errors than the prior manual process.
- Built LLM tooling into data workflows with LangChain, tightening feedback loops 20% and cutting manual effort in code generation and pipeline maintenance.
- Overhauled ETL/ELT pipelines across Databricks and Snowflake, expanding KPI coverage across the client's data model and reworking ticket strategy to grow outreach into the client's market.
- Direct a data engineering team and own Tableau reporting as the client's primary analytical contact.

Economic Data Analyst

Feb 2025 – Jan 2026

State of Florida – AHCA, Tallahassee, FL | SQL, Python, Tableau, SharePoint

- Produced financial analysis reports for healthcare licensure applications across 500+ organizations, each requiring independent judgment since no two shared a financial structure or compliance history.
- Built billing-irregularity, budget-variance, and audit KPIs in SQL and Python that flagged non-compliant organizations for state audit.
- Piped state databases through SharePoint into Tableau, giving policy stakeholders budget-utilization visibility and informing state approvals of new healthcare units.

Data Analyst

Oct 2023 – Dec 2024

Aramark, Tallahassee, FL | SQL, Python, Statistical Modeling

- Traced persistent food over-ordering to a flaw in the demand-forecasting algorithm and was brought onto the team that rebuilt it.
- Built the SQL ingestion pipelines and Python transformation logic behind the production forecasting model.
- Improved event-resource-planning accuracy 25% by rebuilding the model's statistical logic, cutting food waste across campus operations.

Business Intelligence Analyst

Jun 2022 – Jun 2023

Accenture, Hyderabad, IN | Python, SQL, ServiceNow, JavaScript

- Diagnosed why analysis kept missing the mark: no direct contact with the clients the data represented. Fixed it by establishing single-point client contacts.
- Built Python/SQL predictive models forecasting market conditions and client demand; earned ServiceNow Admin/Developer certifications building custom modules for a 10,000+ user enterprise system.

Software Developer – Backend

May 2021 – May 2022

Infinos Technologies LLP, Hyderabad, IN | Backend APIs, Database Architecture, ESP-32

- Built the database architecture and backend API layer for a mobile-controlled IoT cooling unit, with multi-layer security and hashing designed in from the start.
- Optimized ESP-32-to-backend communication protocols, cutting device-to-interface latency 20% and reducing bandwidth demand on unreliable field connections.

PROJECTS

AI Travel Planner · FastAPI · agent loop · Ollama · MySQL · Docker · GitHub Actions

- Chat-driven itinerary generator on an agent loop: the model decides when to pull live weather/currency data into generation rather than hardcoding the calls.
- Intent-classification step routes each message to new-trip / edit / question / off-topic before generation runs, cutting latency on no-generation turns and doubling as a prompt-injection guardrail; multi-day trips generate in capped 5-day segments to keep local-model output reliable at any length.

Cart Abandonment Prediction · scikit-learn · LightGBM · Optuna · MLflow

- Modular, production-style classification pipeline on 100K e-commerce records: 60+ raw signals engineered into 30 leakage-checked behavioral features, tuned with Optuna and tracked in an MLflow registry; hit 0.975 F1 (0.97 precision / 0.98 recall) against a 0.75-0.85 target.

SKILLS

Core	Python, SQL, Databricks, Snowflake, AWS, Spark, Tableau, Scikit-learn, Pandas
ML & AI	LangChain, Agentic AI, LLM Deployment, MLflow, Optuna, Predictive & Statistical Modeling, Forecasting
Infrastructure	ETL/ELT Pipelines, Data Warehousing, Cloud Architecture, Backend APIs, FastAPI, Docker, CI/CD
Platforms	ServiceNow (Admin & Developer Certified), JavaScript, HTML/CSS, IoT & ESP-32, Agile/SCRUM, KPI Design

EDUCATION

M.S. Data Science · Florida State University, Tallahassee FL

GPA 3.66 / 4.0 | Dec 2024

B.S. Computer Science · GITAM University, Hyderabad India

GPA 3.0 / 4.0 | May 2022
